

## Ingredients

### Macro Minerals

**CALCIUM** is important for healthy teeth and bones as well as nervous, muscular and heart system function.

**PHOSPHORUS** is required for bone formation and maintenance.

**MAGNESIUM** is essential for nervous and muscular system function. Magnesium deficiency can cause muscle tremors, nervousness, spooky behaviour, arthritis, stringhalt, warts, mastitis, ringbone, splints, founder and laminitis.

*The ratio between calcium, phosphorus, magnesium has been balanced in this supplement.*

**SODIUM & CHLORIDE (Salt)** are required for the regulation of body fluids. BLL has Australian Organic salt

**SULPHUR** is a component of amino acids which helps strengthen protein tissue and is important for strength and maintenance of skin, hair & hoof.

### Free of Iron & Molasses

Suitable for equines prone to laminitis or founder and insulin resistance. Also palominos show horses, racehorses, pleasure mounts, pony club, breeding, young growing and retired horses.

### Micro Minerals

**BORON** is an essential trace mineral to help correctly utilize calcium and magnesium. Lack of boron can lead to arthritic-type problems and clicking joints.

**COBALT** synthesizes vitamin B12 and is required for healthy bone and red blood cell development.

**COPPER** is required for connective tissue, iron utilization, bone and cartilage development. Copper can brighten a dull, discoloured coat and assist with conditions like anaemia, seedy toe, wind sucking, chewing fences and fungal conditions like ringworm, rain scald and mud fever.

**IODINE** is essential for thyroid hormone function which regulate energy metabolism and growth. Iodine deficiency can result in goiter; an enlarged thyroid gland (swelling in the throat latch).

**MANGANESE** assists cartilage development and utilization of trace minerals.

**SELENIUM** has antioxidant properties which increase disease resistance. Selenium is also important for fertility in breeding animals and for healthy muscles.

**ZINC** is for healthy skin, bone, hooves, coat and reproduction. Zinc deficiency appears as poor hooves, poor growth, dry, flaking skin and dull coats.

**SHOP ONLINE 24/7**

### Vitamins

Vitamins are closely linked to mineral metabolism. Without necessary minerals, vitamins cannot perform as they should.

**Vitamin A** helps skin, eyes & mucous membranes stay healthy. Essential for breeding animals to prevent foetus absorption, contracted tendons in foals.

**B3/ Niacin** helps promote healthy skin and good digestive system in a horse.

**B7/Biotin** is vital for healthy hooves, skin and hair.

**Vitamin D3** aids in bone absorption of calcium and phosphorous.

**Vitamin E** is an antioxidant with similar functions to selenium. Vitamin E is necessary for good health and assists in healing after injury and trauma. BLL Contains Natural Source Vitamin E.

**Folic Acid** helps produce haemoglobin and red blood cells.

Belinda's recommends a self draining container with the Premium Loose Lick Supplement available to equines at all times. The product can be added to feed with the following recommended dose rates (adjust as needed).

**Daily Dose Rates** when added to feed

Large Horse (over 500kg)	90 - 110g daily per horse
Medium Horse (400 - 500kg)	70 - 90g daily per horse
Pony (250 - 400kg)	40 - 70g daily per horse
Miniature (100 - 250kg)	25 - 40g daily per horse

Feeding instructions: see Loose Lick Supplement page on our website;
